The fold over method folds the keder over so that the adhesive is completely encased and locked in place. This ensures a secure durable installation even with fabrics that have lower adhesion levels to KederTape, or when higher tension are desired.

Measure frame size using the outer edge of the frame slot.

Cut graphic a minimum of 1" larger than the image area on all sides. Visit website for printing templates

On back of fabric align outer edge of KederTape with outer edge of the cut fabric. Lightly press KederTape on fabric. Placing wider will loosen the graphic when installed; placing it narrower will tighten.

Fold KederTape so that the fabric is on both sides of the keder. Test fit the graphic. If needed peel back and reposition to achieve desired level of tension. Your graphic is now ready to install.
